

Making cube units

This is a method for building cubes from pieces of rectangular card. These can be used to build the Menger Sponge - you need 8,000 for a Level 3 sponge, or 400 for a Level 2. Let's get cubing!

How to make square units

If you place two rectangular cards across each other at right angles, the area where they overlap in the middle is square. If you then fold the sides in you will get a square with tabs!

You can build the cards into a cube, always leaving the tabs outside, and always placing a tabbed end of a rectangle against a non-tabbed side.
